RESEARCH INTEREST

- **Software Engineering:** automated program repair, software testing.
- **Programming Language:** program synthesis, program analysis.
- **Software Security:** vulnerability detection and fix.

EDUCATION

- **National University of Singapore, School of Computing** Singapore
Ph.D. candidate *Fall 2016 – 2021 (estimated)*
Advisor: Abhik Roychoudhury, GPA: 4.7/5 (until now)
- **Shandong University, Computer Science** Shandong, China
Bachelor (Elite class) *Fall, 2012 – Jun, 2016*
Advisor: Lei Ju, GPA: 90.34/100

RESEARCH PROJECTS

- **Overfitting in Programming-by-Example:** systematically designed a set of techniques, using test generation, symbolic reasoning and semi-supervised approaches, to alleviate overfitting problem in program repair and synthesis. We showed that our approach can fix the bugs detected by OSS-Fuzz. The designed semi-supervised synthesis will be integrated into VS IntelliCode in the near future.
- **Scalable Binary Rewriting:** a static binary rewriting technique that can be scaled to large programs, e.g. Chrome, Firefox. It has collected more than 200 GitHub stars since Apr 2020.
- **Robustness of Deep Neural Network:** a technique based on software engineering approaches that improves the robustness of DNN model. We have a US patent derived from this project and a patent application under-review.

WORK EXPERIENCE

- **Research Intern — Microsoft Research**

Program synthesis to automatically generate edit suggestions in Visual Studio.

2020, 01 – 2020, 06
- **Research Intern — Fujitsu Laboratories of American**

Enhance the robustness of AI models via data augmentation.

2018, 09 – 2018, 12
- **Research Assistant — National University of Singapore**

Conduct research on dynamic Android program analysis.

2017, 07 – 2017, 12
- **System Engineer Intern — Alibaba**

Use Security Enhanced Android (SEAndroid) to increase Android security.

2015, 07 – 2015, 10
